

Make your Own - Dimitri the Frog

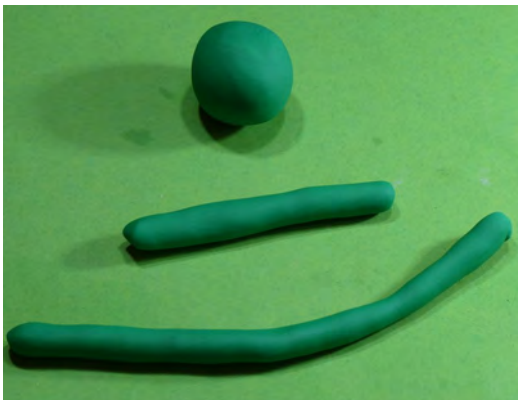

Follow these instructions to make your own Dimitri the Frog:

You will need:

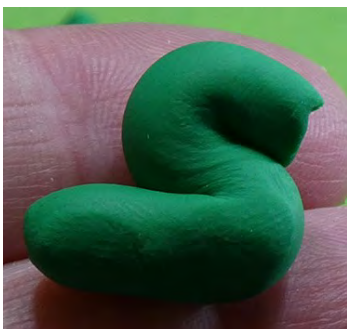

Two small white beads. You can use small balls of white plasticine I just find beads easier as they don't squish so quickly.

Divide the green ball:

Divide the green ball in two and make one ball, one short sausage and one long sausage.

Make the legs (make 2):

Cut the shorter sausage in half. Bend each one into an 's' shape with an elongated end.

Arms (make 2):

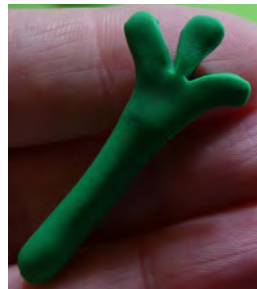

Cut the longer sausage into two parts.

Flatten one end of the sausage.

Cut the flat end into 3 sections.

Use your fingers to round off the ends of the frogs fingers.

Body:

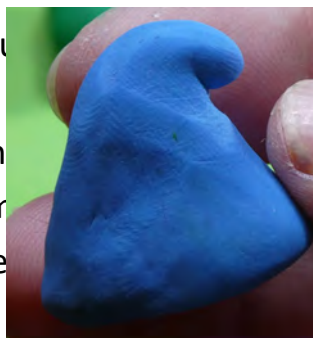

Slightly squash the large green ball so that it becomes oval shaped.

Hat:

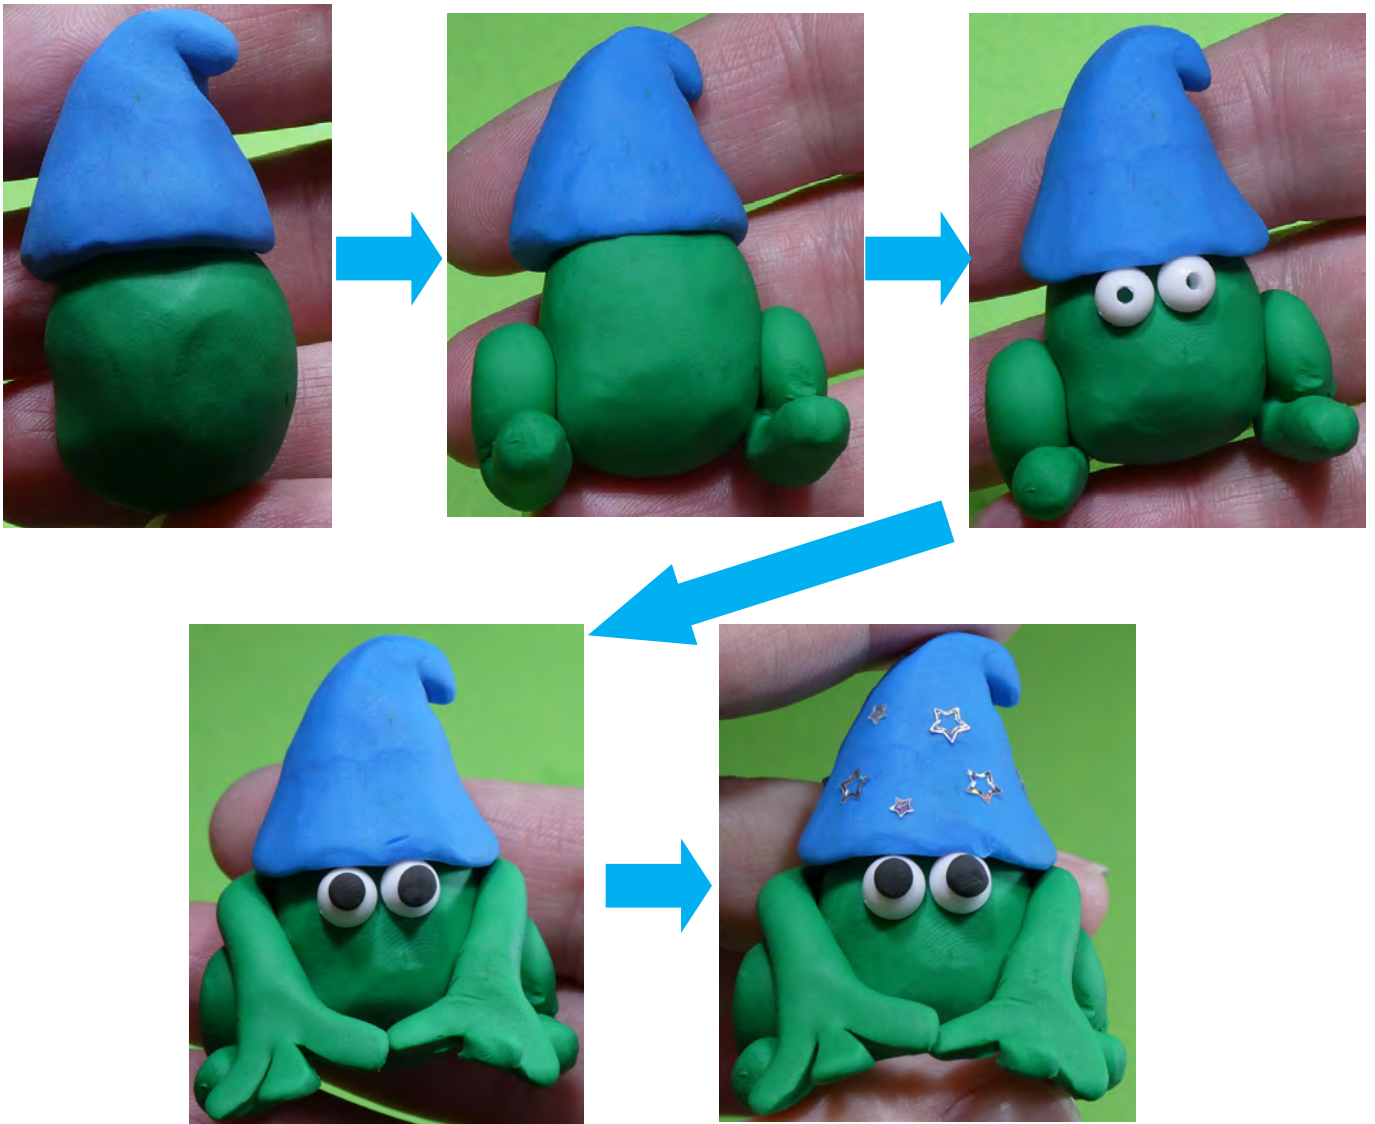

Use a ball of blue about the same size as the frogs body. Shape it into a cone. Use your thumb to create a dent in the flat end.

Roll the point a little longer and then bend it over.

Construction:

Push all the pieces together as shown .

Finish off your frog with a mouth. Use the end of something pointy but not sharp. A dried up pen is perfect.
